PhD in Chemistry

The Chemistry and Biochemistry Department offers the Doctor of Philosophy degree in Chemistry, which consists of 72 credit hours beyond the bachelor’s level (or at least 42 hours beyond the master’s level). The program provides opportunities for education and research in areas consistent with the strengths of department faculty and established research initiatives. The program is designed to prepare professional chemists for careers in teaching and research in academic, industrial, and public-sector settings. It contributes to meeting an anticipated need for PhD trained chemists, particularly Hispanics, in industry and in academia.

Requirements for Admission to the PhD Program

Admissions recommendations will be based upon review of an applicant’s academic record and other relevant performance indicators, set out in the following list.

1. Bachelor’s degree in Chemistry or in a related science discipline from an accredited institution in the United States or proof of equivalent education in a foreign institution.
2. Official transcripts of all previous academic work.
3. Official scores on the general Graduate Record Examination (GRE).
4. Official TOEFL scores of 550 or higher for international applicants whose first language is not English or who have not completed a university degree in the U.S. or at other English-speaking institutions.
5. Three letters of recommendation from individuals who are qualified to assess the applicant’s potential for doctoral work.
6. A personal statement setting out the applicant’s reasons for wishing to pursue a PhD in Chemistry at UTEP and future career plans.
7. Curriculum vitae.

Requirements for the PhD Degree

A total of 72 semester credit hours beyond the bachelor’s degree will be required for this degree. Students who previously earned a master’s degree in Chemistry can, at the discretion of the admissions committee, be awarded up to 30 hours of credit toward the doctoral degree. Each student’s case will be individually evaluated to determine whether additional courses may be required.

Students have to pass cumulative exams by the end of their fifth semester in graduate school in order to remain in the chemistry PhD program. In their third year of graduate studies, PhD students will take the comprehensive exam, which consists of two parts: Part A, presentation of the student’s research project (written and oral); and Part B, presentation of an original research idea, which should be distinct from the student’s research project.

Elective Graduate Courses in Chemistry or Allied Fields-as approved by the student’s Dissertation Committee

Each student, in accordance with the overall program requirements, will develop a degree plan in consultation with her or his supervisor and the program director appropriate to her or his specific interests and academic needs. A minimum of five PhD doctoral level chemistry lecture courses (15 credit hours) must be taken.

</table>
The doctoral level courses taken must satisfy at least three different areas of chemistry. In addition to the minimum requirement students may take up to three additional doctoral level lecture courses (9 credits) from the chemistry course offerings of from any other science or engineering discipline which will count toward their PhD degree. With the approval of the student’s advisor and the program director, a student can take undergraduate courses in science fields (that have been approved for graduate credit) to fulfill this requirement. Graduate students in such courses will be expected to do additional work appropriate to graduate-level training. If a student does not take additional doctoral level lecture courses beyond the minimum requirement of five, nine credits or graduate research must be taken in addition to the minimum requirement of 34 graduate research credits (see below).

**Graduate Seminar**

Doctoral student must enroll in Graduate Seminar at least six (6) times. One of these Graduate Seminar courses is designed to promote professional development. It includes a wide variety of topics in the areas of scientific information retrieval, research ethics, oral and written presentation of research results, and writing grant proposals. Attention is also given to providing the students with current information and advice on career opportunities, writing job applications, and how to conduct themselves at interviews. The other five Graduate Seminar credits are from the weekly seminars that feature accounts of current research by outstanding investigators in chemistry and related scientific areas. Graduate Seminar must be taken every semester of residence, but only six Graduate Seminar credits count toward a student’s PhD degree. Doctoral students must present their research at least once in the Graduate Seminar to the department as a whole, outlining their personal research objectives and results.

**Teaching Practicum**

All doctoral students are required to earn two (2) hours of credit teaching undergraduate laboratory courses or team-teaching undergraduate (or graduate) courses with an experienced faculty member. Students are also encouraged to participate in the professional development programs focusing on preparing future faculty and professionals offered through the Graduate School and the Center for Effective Teaching and Learning.

**Doctoral Research**

Doctoral students must earn credit for at least 34 semester credit hours of original research in some recognized branch of chemistry. The student must work under the guidance of a faculty supervisor. The purpose of the program is to enable the students to develop the skills and knowledge to enable them to carry out an independent program of research. If a student takes only five doctoral level lecture courses, nine additional credits of doctoral research must be taken. If a student takes six or seven doctoral level lecture courses, six or three additional credits of doctoral research must be taken.

**Career Practicum**

Credit can, with concurrence of their research director, be given for students to spend a semester in another academic or an industrial or governmental environment to permit them to explore possible career options.

**Publication Requirement**

Each doctoral student must have co-authored at least one peer-reviewed scientific publication. Manuscripts accepted for publication are acceptable. The student’s dissertation does not fulfill the publication requirement.

**Doctoral Dissertation**

All graduates must complete a dissertation that is a substantial work of original scholarship. The dissertation shall contain an introduction that describes the general area of chemical scholarship and clearly identifies the purpose of the investigation. The research shall have led to new knowledge of a standard worthy of publication in a major refereed journal. If previously published articles are to be included in the dissertation, it must be made clear how much the candidate has contributed. Detail of the nature of the work performed should be provided such that it should be possible for a qualified reader to repeat each step. In cases involving potential patents, all or part of the dissertation can be embargoed for specified periods of time, following accepted university policies. Candidates must defend their dissertations successfully. Part of the defense proceeding will be open to the public.

</tbody>
</table>

A copy of the dissertation in PDF or Word electronic format must be submitted to the Graduate School for format check prior to the scheduled defense date. The dissertation, including an abstract not to exceed 350 words, must be prepared according to the Graduate School’s thesis and dissertation guidelines available at the Graduate School Web site. The student will receive email confirmation from the Graduate School after the format has been approved. The final Graduate School-approved dissertation must be submitted to the Graduate School in PDF electronic format by the deadline as published in the Class Schedule, along with a hard copy of the signature page with original signatures of the dissertation committee members. Information on submission procedures can be found on the Graduate School website. The signature page must be included in the PDF file but it should not be signed.

**Degree Plan**

Required Credits: 72
**PhD in Chemistry** (All courses require a grade of C or better)
