101 Geological Sciences Building
915.747.5501
geology@utep.edu

The Department of Geological Sciences offers a Doctor of Philosophy (PhD) degree in Geological Sciences and the Master of Science (MS) degree in Environmental Sciences, Geological Sciences, and Geophysics.

Programs

Master of Science

• M.S. in Environmental Science (http://catalog.utep.edu/archive/2019-2020/grad/college-of-science/geological-sciences/environmental-science-ms/)
• M.S. in Geological Sciences (http://catalog.utep.edu/archive/2019-2020/grad/college-of-science/geological-sciences/geological-sciences-ms/)
• M.S. in Geophysics (http://catalog.utep.edu/archive/2019-2020/grad/college-of-science/geological-sciences/geophysics-ms/)

Doctor of Philosophy

• Ph.D. in Geological Sciences (http://catalog.utep.edu/archive/2019-2020/grad/college-of-science/geological-sciences/geological-sciences-phd/)

Certificates

• Graduate Certificate in Geospatial Information Science and Technology (GIST) (http://catalog.utep.edu/archive/2019-2020/grad/interdisciplinary-programs/grcertificategist/)

CHAIR: Dr. Kubicki (https://academics.utep.edu/Default.aspx?tabid=71778/)

Professor

Elizabeth Anthony (http://facultyprofile.utep.edu/default.aspx?ID=eanthony/)
Contact Information: eanthony@utep.edu (mtcortez@utep.edu); 915-747-5483
Education: BA, Carleton College; MS, University of Arizona; Ph D, University of Arizona

Diane Doser (http://facultyprofile.utep.edu/default.aspx?ID=doser/)
Contact Information: doser@utep.edu (mtcortez@utep.edu); 915-747-5851
Education: BS, Michigan Technological University; MS, University of Utah; Ph D, University of Utah
Research Interests: geophysics, seismology, environmental geophysics, geoscience education

Katherine Giles (http://facultyprofile.utep.edu/default.aspx?ID=kagiles/)
Contact Information: kagiles@utep.edu (mtcortez@utep.edu); 915-747-7075
Education: BS, University of Wisconsin; MS, University of Iowa; Ph D, University of Arizona

Thomas Gill (http://facultyprofile.utep.edu/default.aspx?ID=tegill/)
Contact Information: tegill@utep.edu (mtcortez@utep.edu); 915-747-5168
Education: BS, University of California- Davis; Ph D, University of California- Davis; Postdoctoral Training, USDA Agricultural Research Service
Research Interests: Aeolian processes, particularly mineral dust and the relation of dust generation to geomorphology, weather, and climate, and the detection and assessment of dust through remote sensing; the environmental geochemistry, source appointment and biogeochemistry of trace elements; the geomorphology, sedimentology, and geochemistry of saline lakes and playas; evaporite mineralogy; earth system science, especially the relationship between landforms, climate/weather, and ecosystems; mesoscale meteorology and air pollution meteorology; the application of X-ray spectrometric techniques in earth and environmental sciences; natural resource management in arid and semiarid lands; and applications of meteorology to homeland security.

Philip Goodell (http://facultyprofile.utep.edu/default.aspx?ID=goodell/)
Contact Information: goodell@utep.edu (mtcortez@utep.edu); 915-747-5593
Education: BS, Yale University; MS, Harvard University; Ph D, Harvard University
Research Interests: Statement of Research Interests 1. Economic Geology, 2.Geochemistry, Origin of Mineral Deposits. My Ph.D. topic was a geochemical study of a mineral deposit in Peru. This theme has always been maintained in my research portfolio with Mexico being the target of most of this research. I currently have 2 students doing supported research within this topic, Mike Feinstein supported by Golden Predator, Joe Lori by Quaterra Resources. 2. Economic Geology?Uranium Upon arriving to teach at UTEP in 1975, I quickly got involved in uranium deposits in Mexico, at Pena Blanca, Chihuahua. The government agency, URAMEX, eventually sponsored three of their geologists to come to UTEP for their Masters degrees, and gave us permission to study their deposits. My model of volcanogenic model was well received, and I organized 2 symposia with field trips for the
American Association of Petroleum Geologists and for the International Atomic Energy Agency, and I edited resultant publications of each organization. I have visited China as a guest of the Beijing Research Institute for Uranium Geology, twice. The IAEA has called on me several times to serve as Sponsor of IAEA Fellows for their stays in the USA, and to serve as Foreign Technical Expert, most recently in Argentina and Egypt. I attended and made presentations at 3 of their meetings in 2009-2010. The IAEA is interested in publishing our book, written with 2 collaborators, Uranium Geology of the Middle East. 3. Environmental Geochemistry? Uranium With the demise of uranium deposit geochemistry in 1985, I became more interested in the geochemistry of nuclear waste. In 1987 Yucca Mountain was designated to be the repository site, and $13B of research and study began. I realized that the Nopal 1 uranium deposit at Pena Blanca, Chihuahua, could serve as a Natural Analogue to Yucca Mountain, and Pena Blanca entered the global inventory of nuclear analogues. Funding for us took off in the early 2000s, when the US Department of Energy drilled 3 deep holes at Nopal 1, Pena Blanca. I was invited to participate in data acquisition and interpretation from those samples. Four national labs and three universities put together a group proposal for $3.5M which was funded. UTEP got 10%. Research at Pena Blanca continues, and our Final Report is being written. Roberto Velarde is a PhD candidate and part of his dissertation relates to Pena Blanca. 4. Environmental Geochemistry - General By the middle 1980s, uranium exploration geology activity was zero, and mineral exploration was to suffer from a 15 year period of relatively low commodity prices. Where are our students going to get jobs? I evolved to include environmental geochemistry in my teaching and research, initiating courses in this topic on the graduate and undergraduate level, and beginning a long series of students from the Environmental Science and Engineering Program at UTEP. Funded projects included the biogeochemistry of chromium working with scientists at Texas A&M, and the spectral response of laboratory-made saline soils. My most recent ESE student was Elia Marquez, who studied arsenic in groundwater in the region. A continuing activity of mine is the use of remote sensing in both environmental and regional geological activities. My teaching of environmental geochemistry expanded into Mexico in the 1990s when I taught in the Graduate School of Universidad Autonoma de Cuidad Juarez for 7 years. In 2001 I began a series of continuing scientific interactions in the Middle East. These academic activities in Mexico and the Middle East have led to numerous environmental research projects. Earth-based geochemistry and remote sensing led me to the following. 5. Regional Geochemical Mapping Regional geochemical mapping (RGM) is a global scientific activity that consists of taking many located samples over an area, and having them analysed for many chemical constituents. The National Geochemical Survey database is vast and underused. The data is largely unprocessed although a few maps have been produced. My UTEP RGM research group has a publication on New Mexico using this data, and we have finished processing Colorado. Our approach is to proceed in greater detail and more samples on a state by state basis. A second manuscript is complete, and we are working with Cybershare, UTEP, on a proposal to expand to the entire USA. 6. Regional Geology of southwestern Chihuahua, Mexico. Since arriving at UTEP in 1975, my interest in economic geology and the origins of mineral deposits (topic 1 above) took me to the Sierra Madre of Chihuahua. This has been a constant theme in my research and teaching. I have supervised 9 students on both MS and PhD levels with topics there. Field trips there with students were made annually for a long time, but have been discontinued today for safety. I have guided, sometimes with colleagues, many professional field trips there, and co-edited 4 guidebooks on the region. The accompanying figure shows the locations of areas of study of several of my students. Studies vary from remote sensing to age dating to rock geochemistry to zircon and microprobe chemistry. Students have made many presentations at professional meetings. Funding became easier from industry since 1993 when complete foreign ownership of companies was permitted. Our profile from the stable craton, across rapidly thinning crust west into oceanic crust, documents changes of style to extensional forces, and the location of mineral deposits at the juncture of select structural elements. 7. Sulfosalts Crystal Chemistry Sulfosalts are a family of minerals found in sulfide mineral deposits. They also contain crystal structures and physical properties which are unique. Two recent doctoral students of mine, Guy Crawford and Steve Sellepack, from the Material Science Program at UTEP, synthesised exotic element sulfosalts and determined crystal structures by Ab Initio techniques.
Contact Information: aavelasco@utep.edu (mtcortez@utep.edu); 915-747-5101
Education: BS, University of California; Ph D, University of California
Research Interests: My current projects include: determining 3-D Earth structure from analysis of US Array data and other data in the southern Rio Grande Rift; exploring techniques for joint inversion; studying aftershocks of large earthquakes in Nepal and Mexico; studying volcanic structure in the East African Rift System in Kenya; studying local earthquakes in the El Paso, TX region; and understanding the link between earthquakes, in particular, the mechanisms for dynamic triggering. I also have projects that focus on educational aspects of science; in particular, we fund early geoscience undergraduates as part of the Academic Year - Pathways Research Experience Program (AY-PREP), and National Science Foundation grant.

Associate Professor

Lixin Jin (http://facultyprofile.utep.edu/default.aspx?ID=ljin2/)
Contact Information: ljin2@utep.edu (mtcortez@utep.edu); 915-747-5559
Education: BS, the University of Science and Technology of China; Ph D, The University of Michigan
Research Interests: Environmental science, water quality, critical zones, shale weathering, soil sustainability

Lin Ma (http://facultyprofile.utep.edu/default.aspx?ID=lma/)
Contact Information: lma@utep.edu (mtcortez@utep.edu); 915-747-5218
Education: BS, University of Science & Technology of China; Ph D, University of Michigan

Deana Pennington (http://facultyprofile.utep.edu/default.aspx?ID=ddpennington/)
Contact Information: ddpennington@utep.edu (mtcortez@utep.edu); 915-747-5867
Education: BS, Ohio State University; MS, Ohio State University; Ph D, Oregon State University; Graduate Certificate, University of New Mexico
Research Interests: Socio-environmental systems, scenario analysis, geospatial modeling and analysis, climate and land change impacts on wildfire/drought/biodiversity/water, earth/ecologic and environmental informatics, data and knowledge integration & synthesis, collaboration and collaborative environments, interdisciplinary teamwork

Assistant Professor

Benjamin Brunner (http://facultyprofile.utep.edu/default.aspx?ID=bbrunner/)
Contact Information: bbrunner@utep.edu (mtcortez@utep.edu); 915-747-5507
Education: MS, Swiss Federal Institute of Technology; Ph D, Swiss Federal Institute of Technology
Research Interests: light stable isotopes, sulfur, nitrogen, phosphorous and carbon cycle, authigenic minerals, geobiology, life at the energy limit

Julien Chaput (http://facultyprofile.utep.edu/default.aspx?ID=jachaput/)
Contact Information: jachaput@utep.edu (mtcortez@utep.edu);
Education: Ph D, New Mexico Institute of Mining and Technology

Hugo Gutierrez-Jurado (http://facultyprofile.utep.edu/default.aspx?ID=hagutierrez/)
Contact Information: hagutierrez@utep.edu (mtcortez@utep.edu); 915-747-5159
Education: Ph D, New Mexico Institute of Mining and Technology
Research Interests: Hydrology and ecohydrology of arid and semi-arid areas, hydrology of coastal and karstic aquifers, ecohydrology of tropical environments, development of scalable methods for the quantification and partition of water, energy and carbon fluxes in natural environments.

Marianne Karplus (http://facultyprofile.utep.edu/default.aspx?ID=mkarplus/)
Contact Information: mkarplus@utep.edu (mtcortez@utep.edu); 915-747-5413
Education: BA, Dartmouth College; Ph D, Stanford University

Jason Ricketts (http://facultyprofile.utep.edu/default.aspx?ID=jricketts/)
Contact Information: jrickets@utep.edu (mtcortez@utep.edu); 915-747-5599
Education: BS, San Diego State University; MS, San Diego State University; Ph D, University of New Mexico
Research Interests: Structural geology, tectonics, and low-temperature thermochronology, Evolution of the Rio Grande rift in Colorado and New Mexico, Geologic mapping

Jie Xu (http://facultyprofile.utep.edu/default.aspx?ID=jxu2/)
Contact Information: jxu2@utep.edu (mtcortez@utep.edu); 915-747-7556
Education: BS, Shanghai Jiao Tong University; MS, Nanyang Technological University & Stanford University; Ph D, University of Wisconsin - Madison
Research Interests: Nanogeoscience, geomicrobiology, biomineralization, environmental mineralogy, biogeochemical cycling of sulfur and heavy metals, advanced interfacial instrumentation in earth science studies, resource recovery and bio-inspired energy research

Research Assistant Professor

Gail Arnold (http://facultyprofile.utep.edu/default.aspx?ID=glarnold/)
Contact Information: glarnold@utep.edu (mtcortez@utep.edu); 915-747-8373
Education: BS, SUNY Oswego; Post-graduate Diploma, University of the South Pacific, School of Agriculture; MS, University of Rochester; Ph D, University of Rochester
Research Interests: stable isotope geochemistry, biogeochemistry, early earth environment, microbial interactions
