International Business Courses

Courses

IBUS 5350. Financial Econometrics I.
This theory and literature driven course, is an in-depth study of methods as employed in finance and accounting research. Subjects will include OLS (including issues regarding violation of OLS assumptions), GLS, SUR, simultaneous equation systems, distributed lag models, and ARIMA. Examples and applications will be drawn predominantly from the financial economics literature.

Prerequisite(s): (IBUS 6300 w/B or better ) AND (IBUS 6302 w/B or better ) AND (IBUS 5350 w/B or better)

IBUS 6300. Intro to Quant Method & Stat.
IBUS 6300: Introduction to Quantitative Methods and Statistics (3-0) This course covers applications of statistical techniques and analysis of business and economic research related to problem specification; probabilistic and distributional theory; modeling and measuring phenomena related to the collection, examination, and transformation of international business and economic data; statistical inference and the testing of hypotheses; the use of non-parametric tools and correlation analysis. Students will analyze real international business and economic data with major statistical software packages used in the field as an introduction to quantitative issues and methods reflected in current international business literatures.

0 Other Hours

Major Restrictions:
Restricted to majors of BSAD,IBUS

IBUS 6302. Multiv Method & Linear Regress.
Multivariate Methods and Linear Regression (3-0) This course is an extensive review of quantitative methods used for the analysis and interpretation of multivariate data in international business problems. Students will analyze real data using major statistical software packages with an emphasis on OLS regression model specification, diagnostics, validation and subsequent inferences; interpreting interactions and higher order terms; moderation and mediation effects; analysis of qualitative, truncated and dichotomous dependent variables; and analysis of variance, factor analysis, structural equation modeling, and hierarchical linear modeling techniques.

IBUS 6303. Advanced Regression Analysis.
Advanced Regression Analysis (3-0) This course is a study of linear and nonlinear regression methodologies, elementary time series analysis, and other introductory econometric topics. The course is designed to provide basic expertise in the application of econometric techniques to hypothesis testing, model building, diagnostic testing, and simulations analysis.

3 Credit Hours
3 Total Contact Hours
0 Lab Hours
3 Lecture Hours

Business Time Series Analysis (3-0) This course is a survey of univariate time series, single equation, and multi-equation systems approaches to applied econometric forecasting analysis. Topics to be covered include autoregressive-moving average (ARIMA) modeling, model identification, estimation, diagnostic checking and out-of-sample simulations. Applications will be drawn from Latin American business conditions, exchange rate, inflation, national income, and balance of payments forecasting methods.

Restricted to majors of BSAD,IBUS

IBUS 6307. Survey Research Methods.
Survey Research Methods (3-0) This course teaches students how to plan, design, and execute international business surveys. Students will learn about cross-national problems associated with questionnaire development, item analysis, scale development, including reliability and convergent and discriminant validity. The course will also examine qualitative methods such as content analysis, event history analysis, and observation.

IBUS 6309. Structural Equation Modeling.  
Structural Equation Modeling (3-0) Structural Equation Modeling is a statistical technique that is useful in situations where there is a complicated set of relationship among variables as specified by theory. It is an increasingly employed technique, and this course is an introduction to its basic concepts, methods and computing tools. It is designed to provide students with the necessary tools to construct, analyze, modify, estimate, evaluate and explain structural equation models, and reports the results in a manner acceptable in professional journals. The course covers topics such as path analysis, confirmatory factor analysis, latent variable structural models, etc.

IBUS 6341. Strategic Information Systems.
IBUS 6341: Strategic Information Systems (3-0) Businesses must use information systems to take advantage of opportunities in today’s highly competitive global economy. A strategic information system (SIS) is a type of system that is aligned with business strategy and structure. This alignment increases the capability to respond faster to environmental changes and thus creates a competitive advantage. This course will focus on those organizations that have successfully used SIS to achieve competitive advantage from a global perspective. Students will learn innovative uses of SIS relevant to different business functions and different business types. Case studies and group activities will help reinforce learning concepts in and use of SIS.

IBUS 6390. Seminar in Orgztnal Behavior.
Seminar In Organizational Behavior (3-0) This seminar will introduce you to the field of Organizational Behavior. The seminar is designed for Ph.D. students and emphasizes the behavior of individuals and groups in organizations. We will focus on current research that emphasizes both the social context of organizational behavior and the psychology of the individual. Organizational behavior, for the purposes of this class, concerns the set of approaches to the understanding of how people in organizations think, feel, and act both as individuals and in concert with others.

The objective of this class is to provide participants with a survey of current research on multicultural aspects of international business. Based on the most recent literature, concepts explored in this seminar are: the meaning of culture and changing expectations in international business; the way relationships and rules work in the organizational environment and how these relationships interact with external constituents. Students will be exposed to several theories explaining how cultures are formed; evolve; and interact in a constantly changing environment and how to evaluate and assess cultural competence in different international organizations. This course will offer a general framework for theory-based empirical analysis of cultural issues in international business organizations.
