PHIL 5303. Ethics and Engineering.
This course will provide students with training in identifying and dealing with ethical issues in the Engineering discipline. The primary objective is for graduates of this course to be able to approach engineering problems ethically, i.e., they will learn to better understand how real world engineering issues can and should be analyzed for their ethical determinations and that solving technical, engineering problems entails situating those problems in an ethical context. Students will learn traditional ethical paradigms, such as virtue ethics, deontological ethics, and utilitarian ethics as a basis for cultivating their moral imagination and ethical sensitivities in order to better understand the perspective of others and the ability to better deal with professional, cultural, and social disagreements and ambiguities.

PHIL 5304. Science and Ethics.
This course provides an in-depth examination of the interdisciplinary character of science and ethical theory. On the one hand, students will be introduced to traditional and/or contemporary paradigms of science as a field of study and applied research. On the other hand, they will also be presented with traditional and/or contemporary paradigms of ethical theories of understanding normative constraints in the domain of scientific study and research. Students will be introduced to a range of approaches in scientific methodologies, including but not.

PHIL 5305. Philosophical Research & Writing.
This proseminar will serve as an introduction to graduate study in philosophy. Specifically, it is designed to help students develop the argumentative, reading, writing, and discussion skills necessary to complete the graduate program successfully. While the thematic emphasis will vary depending on the instructor, we will provide a survey of core research areas in the department and their broader philosophical context. In addition, the course will cover the mechanics of research in philosophy including the use of electronic databases and other resources. The course is also intended to serve as an orientation to academic philosophy and should permit students to evaluate their options as they plan their careers.
