SOCI 5362. Border Research.

This is an experimental graduate seminar devoted to border research. The goal is for this course to be a mix of in class, social science methodology and border related theoretical readings, combined with fieldwork experience. We will discuss the basic fundamental debates, interpretations, ethical implications and techniques of research for the social sciences as it has typically related to the U.S. Mexico border. We will focus on the nuts of and bolts of participant observation, field notes and interview techniques.

3 Total Contact Hours

0 Lab Hours

3 Lecture Hours

0 Other Hours

SOCI 6307. Sociology of Disasters.

An overview of sociological research on disasters. While popular myths portray disasters as uncontrollable forces emanating from nature, sociologists have long understood disasters as social phenomena. By examining research on specific disasters, such as hurricanes Katrina and Harvey, students will gain an understanding of how public policies often turn weather-related hazards into disasters. Students will also gain a deep understanding of how disasters both reveal and magnify inequities by race, class, gender, and ability.

SOCI 6308. Health and Healthcare Policy.

Who is healthy in American Society and who is not? How is our health care system organized? Why is it different from most other industrialized nations? How does the organization of medical care affect the quality and cost of that care? Our goal will be to gain a deeper understanding of the organization, policy issues, and delivery of health care in the U.S. We will examine debates within the field, the individual's experience of health and illness, how people use the system, including cross-border health utilization, and possibilities for reform.

SOCI 6314. Migration and Mobility.

This seminar on transnational migration of people examines the processes by which immigrants leave their communities, the barriers to migration and mobility, the social networks that link together migrant countries/communities of origin and their country/community of settlement. Structural factors that compel people to cross international boundaries, integration and settlement, cross-border social networks, and responses to such migratory patterns will be evaluated. As such, special focus is placed on laws and policies, economic patterns, gender, and new directions in immigration research.
