SOCI 5360. Gender.
In this seminar, we will explore the social experiences of gender and sexuality from a cross-cultural and historical perspective. The first portion of the course is dedicated to developing a theoretical and methodological grounding for understanding gender and sexuality. We will then move into an exploration of a range of topics including reproduction; sexuality and identity; family; marriage and kinship; gendered hierarchies and power; religion; globalization; social movements; and health.

SOCI 5362. Border Research.
This is an experimental graduate seminar devoted to border research. The goal is for this course to be a mix of in class, social science methodology and border related theoretical readings, combined with fieldwork experience. We will discuss the basic fundamental debates, interpretations, ethical implications and techniques of research for the social sciences as it has typically related to the U.S. Mexico border. We will focus on the nuts and bolts of participant observation, field notes and interview techniques.

SOCI 5363. Environmental Justice.
The goals of the course are to (1) understand the nature and geography of specific environmental hazards, such as industrial chemicals, pesticides, hazardous waste, electronic waste, air pollution, and nuclear waste, as well as explore public policy initiatives for managing such hazards and their advance impacts. (2) Explore the racial/ethnic and socioeconomic dimensions of various environmental issues, as well as the environmental aspects of economic and social justice concerns. (3) Provide a comprehensive and critical overview of the empirical research literature on EJ analysis.

This seminar explores how understandings and experiences of health, illness, healing, and the body are shaped by culture, power, and moral concerns in society. We will also consider how race, gender, class, ethnicity, and sociopolitical status shape the politics of life, illness, healing, and dying. We will approach these questions primarily, but not exclusively, within biomedical contexts.

**SOCI 5381. Cartography & Visualization.**
This course is an introduction to the concepts and techniques of thematic cartography and the visualization of digital geographic data. Students are expected to develop skills necessary for creating and designing maps and evaluating cartographic representations of information. It has two major objectives: (a) to provide a general introduction to the principles and techniques of computer cartography with a specific emphasis on thematic map design; and (b) to provide hands-on, map-making experience using geographic information systems software.
