ECON 4335. Economics & Law.
Economics and Law is a natural fit. Economics is the science of rational choice in a world in which resources are limited relative to human desires. The legal environment, in turn, determines the “rules of the game” as played by rational decision makers. It is quite natural for economists to question the origin, nature, and consequences of those rules as they pertain to individual and group choice behavior. Economic methods will be applied to analyze law and the law’s effect on behavior. Prerequisites: ECON 2304 with a grade of D or better.

ECON 4369. Introductory Health Economics.
Introductory Health Economics: This course covers essential concepts of economics applied to the healthcare sector, and provides students with the tools for understanding the challenges of delivering and financing health care. A general background of the U.S. healthcare system is the basis for this course, followed by a review of the economic forces which make the healthcare sector so unique in our economy. At the conclusion of this course, students will be able to: 1) understand the importance of the healthcare sector in the U.S. economy, and describe the organization, service delivery modalities, stakeholders, and financing of healthcare services; 2) explain the main economic theories related to the healthcare marketplace, including production and demand of healthcare services, insurance, and financing of healthcare services; and, 3) apply cost-effectiveness analysis for the evaluation of healthcare interventions.
