

BBA in Finance

Finance is the study of resource allocation, that is, the process, markets, institutions, and instruments that facilitate the transfer of money and wealth.

The Finance major provides students with the theoretical framework and analytical tools and techniques to handle a variety of finance and business functions. The program is designed to prepare a student for financial positions with non-financial corporations, the financial services industry, energy companies, small businesses, and real estate firms.

Marketable Skills

1. Critical thinking: Analyze and evaluate issues to solve problems and develop informed opinions.
2. Global awareness: Understand and appreciate people, cultures, and ideas from around the world that impact our community.
3. Leadership: Step up, think, and act critically and creatively to bring others together to accomplish a common task.
4. Organization: Use resources effectively and efficiently to stay focused on different tasks.
5. Problem-solving: Find solutions to difficult or complex issues.
6. Time management: Prioritize goals and organize time to be more productive and efficient.

Learning Outcomes

1. Students will assess an organization's strengths, weaknesses, opportunities, and threats and will integrate these factors into a viable strategic plan.
2. Students will analyze a firm's financial and accounting information identifying firm strengths and weaknesses and will develop suitable strategies to improve corporate performance.
3. Students will recognize, measure, and analyze market demand for a product or service and will integrate this analysis into an effective marketing strategy.
4. Students will understand the role of financial markets and institutions in our economy and will integrate these monetary factors into an effective decision-making process.
5. Students will employ production operation models to supply chain problems and will recommend the operating strategy that maximized shareholder value.
6. Students will integrate decision processes and models from management, marketing, economics, finance, and accounting into the value creation process.

Fast Track

The Fast-Track Program (<http://catalog.utep.edu/admissions/undergraduate/fast-track/#text>) enables outstanding undergraduate UTEP students to receive both undergraduate and graduate credit for up to 15 hours of UTEP course work as determined by participating Master's and Doctoral programs.

Not all undergraduate programs have elected to participate in the Fast Track option, so students should see their departmental graduate advisor for information about requirements and guidelines. A list of courses that have been approved for possible use at the graduate level is found here (<http://catalog.utep.edu/admissions/undergraduate/fast-track/#fasttrackcoursestext>).

BBA in Finance with a Concentration in Risk Management

The concentration in Risk Management within the BBA in Finance is built around the general concept of digital Integration. Digital integration applies the theory of Actuarial Science and Finance using common computer software (Excel, SAS, Eviews) with real world data, so that the students are prepared to perform on-the-job from day one. Academy Learning encourages students to interact, to improve their understanding of the material, and to model the personal interaction in the insurance industry. These concepts form the basis of the degree plan and model the skills used in the working environment of the business world.

Educational Objectives

1. Students will be prepped to take and pass two of the required exams to become an actuary: the P (Probability) and F/M (Financial Mathematics) exam, administered by the SOA. Students will be strongly encouraged to take the F/M exam in the Spring of their sophomore year and the P exam in the Spring of their junior year. Specific prep classes are part of the degree plan. In addition, the students will be prepped to take the MLC (Models for Life Contingencies) exam based on the material covered, after graduation.
2. Students will have strong skills applying common computer software that is widely used in the insurance industry. They will be able to build complex Excel spread sheets, write VBA Excel macros, create statistical and forecast models in SAS, manipulate and organize large datasets in SAS and Excel, and develop actuarial models based on the life market.
3. Business and interpersonal skills will be developed based on the Academy Learning design, business workshops, and through written reports and presentations.
